4 Port Powerline
Home Network Adapter

Model# HPE410AVP

Turn any electrical outlet in the home into a high-speed home network port with Internet access. Powerline technology networks the home without having to rewire or struggle with spotty or unreliable wireless connections.

Internet Access for up to 4 Devices

Connecting the 4 Port Powerline Home Network Adapter to your home theater allows you to **bring high speed Internet access** to your TiVO®, satellite receiver, Blu-Ray Disc™ player, gaming console, television, or other DVR device. This allows you to enjoy the many online applications available such as on-demand programming, software updates, and HD video streaming.

Plug It In, Turn It On, Instant Access

Installation takes only seconds. Simply plug the Powerline Home Network Adapter into an electrical outlet where a home network connection is needed. Connect the Adapter up to four (4) Ethernet-ready devices. Then, connect an Actiontec Single Port Powerline Home Network Adapter to an outlet near the broadband router and to the router itself. That's it...no software or configuration is required.

"Top Secret" Grade Security

The 4 Port Powerline Home Network Adapter features **128-bit AES**, which was **originally used by the U.S. government** for classified, top-secret documents. AES security is so secure, few, if any computers, today can break its code.

Additional security can be achieved easily. Just press the button on each adapter within two minutes and you'll have updated your devices to a new security key.

Energy Efficient

Without compromising on performance, the 4 Port Powerline Home Network Adapter **saves up to 60% energy** for the user by switching to energy saving mode when no traffic is being moved.

Features

- Four 10/100 BaseT Ethernet LAN
- Supported Home Theater Devices
  - TiVO
  - Slingbox
  - Xbox 360
  - Playstation 3
  - Wii
