# Action tec Creative Solutions for the Digital Life™

## Plug AV 200 Mbps Ethernet Adapter

ust when you thought moving big files from one device to another around your world would be a complicated and time-consuming task, Actiontec comes to your rescue. With the new MegaPlug AV 200 Mbps Ethernet Adapter, you can expand your current home network (using your alreadyinstalled power lines) and experience blinding transfer speeds, all at the same time! Now, you can transfer movies, or multiple songs, or any other large files, from one networked device to another, in minutes instead of hours, or seconds instead of minutes.

## Speed, Speed, and More Speed

The first thing you'll notice about the MegaPlug AV Adapter is its speed. Hundreds of photos transfer from the computer in the den to the computer in the living room in a flash. A multi-gigabit movie file streams effortlessly from the kitchen to the bedroom.

## **Security for the 21st Century**

The MegaPlug AV Adapter supports Push-Button Security. This feature makes it easy to connect all the devices on your local network with a unique security key. Instead of having to manually change the security key, Push-Button Security connects your devices to the network simply by pressing a

button. The MegaPlug AV Adapter also features 128-bit AES, which is a new type of security and the first available to the general public that's been approved by the U. S. government for classified, top-secret documents. AES security is so secure, no computer existing today can break its code. What this means, essentially, is that you can make all your files top-secret, for your eyes only, and never worry about outsiders snooping around your personal business.

#### **Features**

- No new cables required. Uses the existing power lines in your home
- Very Easy to Use...Simply plug in
- Compatible with any Router or Gateway
- Supports HomePlug speeds up to 200 Mbps\*
- Integrated QoS
- Secure data encryption

\* Theoretical data throughput numbers are based on maximum, theoretical PHY throughput for HomePlug AV. Actual data throughput of up to 90 Mbps (UDP) seen in laboratory testing. The throughput will vary based on the condition and noise found on the power lines within the home as well as the type of Ethernet Adapter supported on each computer or other device.
