

MyWirelessTV3

4K Wireless HD Connection Kit

Enjoy 4K Anywhere in the House— No WiFi Required

Watch your favorite sports and entertainment in 4K resolution anywhere in your home for an immersive home theater experience without wires. MyWirelessTV3 replaces unsightly HDMI cables with the convenience of wireless technology. It's fast and simple to install an HDTV anywhere you want. The MyWirelessTV3 kit wirelessly connects HDTVs to most HDMI cable/satellite set-top boxes, Blu-ray players, and consoles up to 150 feet away, even working through walls and floors¹. Enjoy the convenience of wireless without sacrificing picture or sound quality.

Eliminate the Cable Clutter

MyWirelessTV3 provides the flexibility to network your home exactly how you want, without investing in an expensive wiring project that involves running cables throughout your home. Hang a flat panel TV in the master bedroom, and connect another HDTV in the kid's room and save the cost of ordering another set-top box or cable hookup. Mount a big-screen TV outdoors and extend the party to the patio.

Easy-to-Use, Flexible Solution

MyWirelessTV3 takes just minutes to install and works with most HDMI compatible source devices, including cable or satellite set-top boxes, DVRs, Blu-ray players, gaming consoles, desktop and laptop computers. You can stream live TV, as well as protected content such as Blu-ray and DRM. Support of pass-through infrared means no special remote controls required. Use your existing remote control from any connected room.
